

# Local Deploy

**Local Deploy from Wireless Logic enables IoT solution providers to access the optimum connectivity solution for their in-country or regional deployments.**

We work with the best partners and use the best available technologies to create cost-effective, secure and scalable IoT solutions for IoT deployments on Conexa, our 'built for IoT' network or in partnership with 50 direct MNOs, or 750 roaming partners globally.

We offer a range of local deployment solutions for applications with low data, wide coverage requirements to higher data applications where performance and cost are key.

*Find out more about Local Deploy... >*

### Maximise your Coverage and Resilience

Use a multi-network SIM for access to several networks in your target country or region. This makes deployments easier and provides resilience.

### High Performance

Select a single network SIM for applications which require higher data and performance in your target country or region.

### Future Proof

Leverage multi-IMSI or eSIM for insurance against future network quality or commercial issues.

### Speed time to market

Remote SIM provisioning lets you reconfigure SIMs over-the-air and deploy into new countries quickly.

## Choose the right SIM and network services for your local country deployments

- **Multi-Service capability**  
*Voice, SMS and Data services on 4G (LTE Cat-6, Cat-4, Cat-1 and Cat-1 BIS) and 5G are supported.*
- **Static and Mobile applications**  
*Tailored solutions for static sensor deployments or high-data mobile applications.*
- **SIM and Device Management**  
*SIMPro and DevicePro provide remote manageability, insights and detailed analysis of device behaviours and performance.*
- **Local Infrastructure**  
*Private data centre infrastructure in 15 locations address low latency, permanent roaming and data sovereignty requirements.*
- **Secure Private Networks**  
*Private network infrastructure and features like IMEI locking, white or blacklisting, VPNs and Private APNs protect your devices and data.*

## Sectors **benefitting** from Local SIM Solutions...

Applications which only have **in-country** or **regional end-users** with **lower data, wider coverage, high-resilience** requirements.

Organisations who connect **vehicle (road, rail, air) fleets**, **have high data requirements** or **connect remote sites** with stringent privacy regulations or latency requirements.

# Why Wireless Logic?

## Global Coverage

Our 'built-for-IoT' network services and partnerships provide global coverage and local access into 50 major networks.

## Flexible Solutions

Operator and technology agnostic solutions, with pricing that scales with your business.

## SIMPro Platform

Connectivity management through a single, smart window.

## Expert Local Support

20+ years' experience in helping our customers design, deploy and manage IoT applications.

## Secure & Resilient

Private infrastructure in 15 major data centres transmitting data reliably from device to end-point
